I was going to hold off until TQ-NOC figures out what is going on with the MPLS network we have been having issues as of late and before I commit anymore I would like to see if those issues get fixed.

Yes... The old 10.5Mbps contract will go away and be replaced by this one. And, we will revise the copay agreement as well. This is 36 month pricing, so this particular circuit will be under contract a little longer than your other circuits, but it shouldn't pose a huge problem. Worst case is that you'll just keep the other circuits in place until this circuit expires. Or, if you end up renewing with RHT, then we can renew them all at the same time.

Let me know if this is the route you want to go and I can get the contract/paperwork to you.

Razi: Attached is the pricing for the potential upgrade to a DS-3 (45Mbps) HealthNet circuit to replace your 10.5Mbps HealthNet circuit. From my understanding, DS-3s are now provided on fiber, so we will have to make sure we allow enough time for this potential construction, if you choose to go this route.

The increase in the monthly funded rate will be approximately \$502.04 (just about double what you are paying now for the 10.5Mbps) and you're getting about 4X the bandwidth.

See attached for details. I'll be glad to discuss when you're available.
